

- A Watch button
- B Blushield logo
- C Watch strap
- D Watch face

Firstly connect the USB A charging head **D** to a USB charging socket or USB mobile phone charger. Fast chargers may not work it is recommended to use a lower watt charger as the amount of current required to charge the watch is very small.

Connect the charging head **C** to the magnetic port **B**. The charging head will automatically align to the magnetic port and start to charge your watch. The Blushield logo will first be seen on the watch face followed by the charging symbol in blue and purple colors with a lightning bolt indicating the charging has started. Also the red indicator LED lights will light up on the back of the watch. **A**

Leave your watch face down if possible to charge the full length of time. Approximately 3-4 hours depending on the charger used.

The charging head is connected to the magnetic port only by magnetic attraction. Be sure this is in line and charging has started. Try to avoid bumping the USB cable during charging as the charging head may become misaligned and fail to charge properly.

Once the charging is complete the watch face will display 100% indicating a full charge has taken place.

- A LED indicator light
- B Magnetic port
- C Charging head
- D USB A charging head

Watch case - aluminium alloy
 Watch face - Gorilla glass
 Watch strap - TPU (leather available)
 Water resistance - IP67 minor splashes
 Battery size - 400mAH
 Battery life - up to 500 charges
 Battery time between charges - up to 2 days
DO NOT SHOWER WITH YOUR WATCH ON
DO NOT SWIM WITH YOUR WATCH ON

Now you might think "My Blushield watch W1 is IP67 waterproof and I can go swimming or take a shower wearing it." ... Watches with this IP code can indeed withstand a bit of water, but the IP67 rating only means that the device is completely dust-proof, and can withstand minor splashes like rain or accidental spills. Any immersion in deep water or salt water could render your watch useless and effect the internal workings possibly even destroy it.

The W1 watch from Blushield is not covered under warranty for any water damage. If your W1 becomes damaged it is not repairable and you will have to buy a replacement model. Blushield will not be liable for any water related damage so take good care of your watch and keep it away from water as much as possible.

With proper care and careful use your W1 should last up to 500 charge cycles in some case possibly years of use. If you do not use your W1 for a length of time battery degradation can occur which means the battery loses its ability to charge fully over time. This happens with all rechargeable batteries. It is recommended you keep your watch charged to get the maximum life out of your watch.

Your watch W1 carries a warranty for a period of 1 year from the date of purchase. The warranty covers manufacturing defects limited to performance of your watch.

The warranty does not cover:

- Accidental dropping
- Screen breakage
- Battery life
- Water damage
- Deliberate tampering
- Broken strap

Be sure to contact your official Blushield distributor for more information.

The watch can be used for 3 different languages:

- Japanese
- German
- English

These are all fully programmable and a programmed guide is included with each watch in those specific languages.

Thank you for purchasing Blushield W1 an innovative product for protection between protected zones. Be sure to protect your home and office areas with our large area models such as B1 and C1 as the watch is not suitable for large area use.
